Rodrigo Jiménez

.Net Software Developer

Uruapan

Summary

Full stack developer with more than 10 years of experience on the .Net Framework. My background includes object oriented programming, functional programming, design patterns, microservices, containers, virtualization, and networking.

Experience

UL

8 years 11 months

.Net Software Developer

September 2015 - Present

Albany, New York Area

Working on a Data Entry software for capturing and sharing chemical information at industry level. High use of Knockout JS framework, .Net MVC, data sharing via Web Services and XML transformations.

.Net Software Developer

May 2010 - September 2015 (5 years 5 months)

Developing and maintaining software for the chemical industry using .net technology. Creation of web services to interact with other companies, web pages and software to design documents related to chemical regulatory compliance. Some of the software products are translated into more than 50 languages. MS SQL/ORACLE/.NET.

Quantuvis Consulting (Softtek)

.Net Software Developer

June 2009 - May 2010 (1 year)

MVC .Net cross-browser web page for companies that wanted to be compared with their competitors so they can manage their milestones and achieve better competitiveness in their areas.

During this time I worked in the migration of Quantuvis Java based system to .Net MVC 1.0 Microsoft technology. Once the migration was completed new development took place. I worked on developing new modules and user

controls. Requirements for this project included cross browser support and heavy use of charts for displaying results to the end users.

GMO (softtek)

.Net Software Developer

July 2008 - July 2009 (1 year 1 month)

Developing components and controls for a Rich Client Application with a WPF front end and a WCF back end. It makes extensive use of multithreading. It was designed to be very user friendly, visually attractive and user responsive.

This software allows GMO to better manage the assets for their clients. High accuracy in the amounts was very important since this company was trading shares for their clients. Everything was double-checked and unit tested to ensure a highly accurate software that shows status of the transactions on real time.

Vallarta Online

.Net Software Developer

July 2007 - June 2008 (1 year)

Tourism oriented web site to book hotel reservations, tour reservations, car rental and suggesting points of interest in the Puerto Vallarta Bay area. Site was following design guidelines from amazon for web interfaces.

Education

Universidad de Guadalajara

Bachelor's degree, Telecommunications Engineering
